Integrated Optimal Design

Stable and safety

- Creative shock absorption technology from AJAX to effectively reduce the shaking of the microscope.
- The microsystem is fixed on the integral forming bottom plate, which is stable and safe.
- Ground column with super bearing capacity.
- The tool disc arm is rotated under the seat to avoid collision with the microscope arm.

American backrest

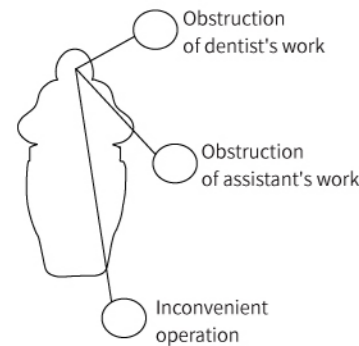

- Small and light, ample legs space, more suitable for long-term operation, contribute to spinal health.

Save space

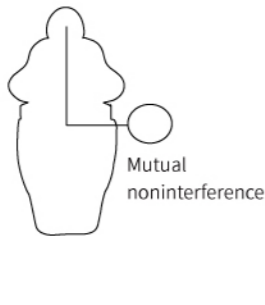

- The microsystem is fixed on the left side of the base plate, occupying less space and saving 50% of the space compared with the moving base.
- Side box can rotate 90 degrees without occupying assistant operating space.

Placement of mobile type microscope

Placement of AJAX Integrative machine

Convenient operation

- Ergonomic wall hanging design, wall hanging and dentists, nurses are not cross-cutting, do not interfere with each other.
- Microscope reaches out and touches immediately, and restores its height with a push, avoiding collision between human body and instruments and frequent arrangement before and after treatment.

Neat and beautiful

- The pipeline is hidden in the hanging arm, which does not affect the doctor's operation, avoids loose wiring, is neat and beautiful, and is convenient for disinfection.

Easy installation

- Compared with mobile, wall-mounted and chandelier-mounted microscopes, the hardware requirements of the dental treatment machine with integrated microscopy are very low, and the installation conditions are similar to those of conventional dental chairs.

Tailor-made for microscopic health

D9 doctor stool

- Armrest: comfortable and skid-proof, provide support for doctors' elbows, reduce muscle burden and reduce the risk of occupational diseases such as shoulder periarthritis.
- Ergonomics: The front part of the cushion is protruded in the middle, and the sides are depressed to prevent forward sliding and ensure the normal circulation of blood in the thighs.

Meticulous operation

- High quality microscopic system, imported optical parts, flexible activities, to meet a variety of operational needs, realistic imaging.

Quality Creates Value Detail Makes Difference

Integrated Microscopic Dental Chair Unit

Integrated Microscopic Dental Chair Unit

Dental microscopy can implement fine treatment, reduce patient's pain and optimize doctor's working posture. It is developing rapidly. At present, dentists often use mobile or ceiling-mounted microscopy, but in the process of using it, there are many problems, such as occupying large space, obstructing operation, disordered pipeline and complicated installation. Aiming at the above problems, Aegis introduced an integrated microscopic dental treatment machine after a series of deep integration optimization.
